

Daikin Holds Unquestionable Leadership in HVAC Industry

In the highly competitive HVAC industry, Daikin knows how to hold its fort and rise above the competition. Its commitment to leadership is unquestionable with its top of the line products from air conditioning systems to heat pumps and ventilation systems. It has remained as the industry leader for the last 80 years.

Hype? Not at all! Daikin's industry leadership is backed by case studies documenting years of successful installations and utilization of its systems ranging from its VRV8 system (Variable Refrigerant Volume), designed for commercial spaces; VRV-S made for residential spaces; Quaternity, Daikin's single-room mini-split system, smart heat pumps, and SkyAir, among others. These innovative systems have been designed to fulfill Daikin's commitment to industry leadership to provide energy efficient and superior air conditioning solutions to homes, commercial and industrial spaces. As proof of industry leadership, Daikin was the recipient of the 2010 Innovation Award for two categories: Quaternity (for indoor air quality) and Daikin Altherma (Green Building category). The awards were conferred by the Air Conditioning, Heating and Refrigeration Institute in the US. In 2009 it was also awarded the Dealer Design Award by the ACHR News, a leading publication in the industry.

Daikin calls its competitive edge the 'Daikin Difference' referring to the corporation's innovative drive towards advanced heating and cooling systems that guarantees energy efficiency with comfortable, moderately low noise levels. Daikin's Constant Comfort Inverter Technology is a testimony to energy efficiency which uses renewable energy to heat or cool homes. Meanwhile, noise level comparison tests reveal that Daikin systems yielded moderately low noise levels with indoor units in quiet mode at 25 dB; indoor units at low speed at 30dB; outdoor units at low speed at 43 dB; and outdoor units at low speed at 46 dB.

[Comfort Connections, Daikin's authorized distributor in Ontario](#), believes in the concept of green building, and is especially focused on bringing sustainable heating and cooling solutions to consumers through its dealers.

Perhaps what consumers rave most about Daikin products are its money-saving and user-friendly features. Smart cooling and heating systems (for indoor units) have movement sensors that automatically adjust the temperature so that the system continues to cool down when no one is around but at higher temperatures, resulting in lower energy consumption. This gives the consumer significant savings. On the other hand, Daikin has made their products so user-friendly it's comparable to handling a TV clicker. Indeed, it's comfort and convenience at its best.

These top of the line HVAC systems are available in the province, through Daikin's authorized Ontario Distributor, Comfort Connections. The Markham-based specialty HVAC distributor carries the following [Daikin ductless air conditioning systems](#): single-room and multi-room systems; Altherma, Daikin Inverted Ducted; VRV8; VRV-WII; VRV8-S and SkyAir. The 21-year-old company has authorized dealers all over the province to oversee system installations and utilizations, and to ensure that end users are satisfied

with the products. Apart from these, the company also carries Archgard gas and wood fireplaces and Monitor tankless water heaters.
